

ADULT GLIDESCOPE INTUBATION

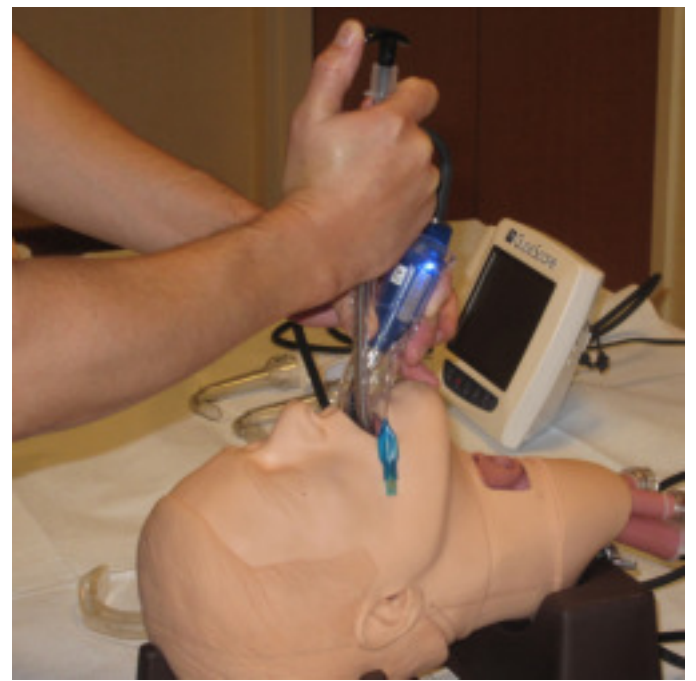

Step 1: Insert the glidescope midline into the mouth slide posteriorly until epiglottis visualized

Step 2: With the tip of the blade in the vallecula rotate the blade anteriorly to bring the vocal cords into view

Step 3: Insert the endotracheal tube from the side of the mouth until the tip is visualized on the monitor

Step 4: Slide the tube in line with the Glidescope blade and advance tube through vocal cords

ADULT GLIDESCOPE INTUBATION

Step 5: Visualize the tube passing through the vocal cords on the Glidescope monitor

Step 6: Stop advancing tube when cuff reaches vocal cord so that rigid stylet may be removed.

Step 7: Use thumb to back stylet out of tube then advance tube to predetermined depth of insertion
