

LARYNGEAL MASK AIRWAY

Step 1: Insert thumb into mouth and pull mandible down and forward to open mouth

Step 2: Insert LMA along roof of mouth

Step 3: Place index finger between mask and tube to guide LMA into place

Step 4: Inflate LMA cuff, attach to bag valve and ventilate

KING TUBE

Step 1: Insert King Tube directed to right and turn anterior once tip passes base of tongue

Step 2: Advance tube until red connector is at teeth and then inflate cuff using 60 mL syringe

Step 3: Connect King tube to bag valve and attempt to ventilate

Step 4: Pull back King tube with cuff inflated until bag valve ventilation is optimal

KING TUBE EXCHANGE

Step 1: Insert Bougie through gastric port of King Tube

Step 2: Advance Bougie until felt to pass through distal tube into trachea

Step 3: Deflate King Tube cuff

Step 4: Stabilize bougie and remove King Tube over bougie

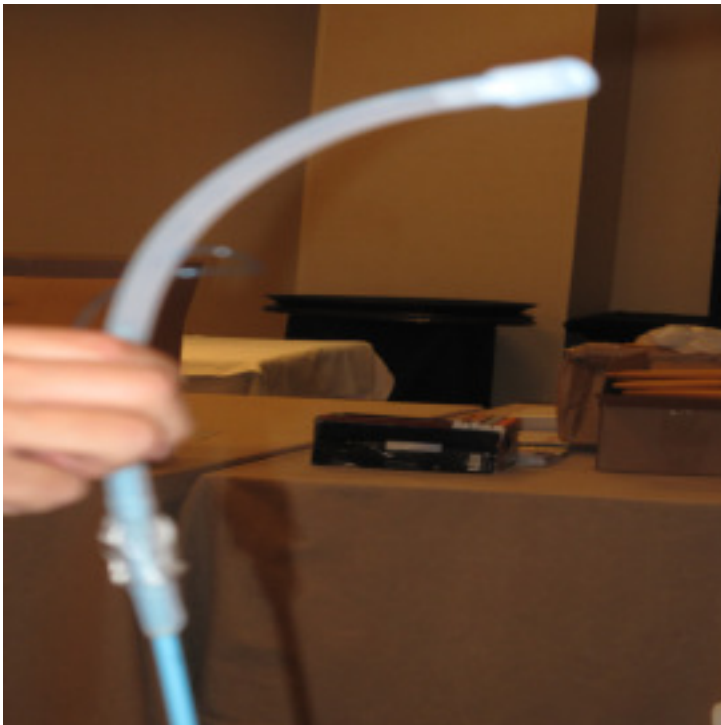

KING TUBE EXCHANGE

Step 5: Bougie remains in trachea while endotracheal tube is prepared

Step 6: Insert laryngoscope to facilitate passage of endotracheal tube

Step 7: Advance endotracheal tube over bougie into trachea. Rotate 90 degrees if resistance

Step 8: Stabilize endotracheal tube and remove bougie
