

# PEDIATRIC GLIDESCOPE INTUBATION

**Step 1:** Insert the Glidescope midline into the mouth and advance blade until epiglottis visualized

**Step 2:** With the tip of the blade in the vallecula gently elevate the Glidescope to bring vocal cords into view

**Step 3:** Insert tube from right side of the mouth until tip of tube passes base of tongue

**Step 4:** Rotate the endotracheal tube in line with the laryngoscope blade until tip of tube visualized on monitor

# PEDIATRIC GLIDESCOPE INTUBATION

**Step 5:** Advance tube through vocal cords and remove stylet
